## **DETAILED ACTION**

## **Drawings**

Figs. 1A, 3A and 3B are improperly crosshatched. All of the cross hatching patterns should be selected from those shown on page 600-81 of the MPEP based on the material of the part. Also see 35 CFR 184 (h)(3) and MPEP 608.02.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 30-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Eng et al. (5952611).

Eng et al. teaches:

- A substrate 76 having a first surface with a pattern (84,100) of conductors
- The substrate having a second surface including a die attach site
- A wire bond slot 86 forming an opening through the substrate

USPQ 226.

A cover member 60, wherein the cover member comprises tape –
 Col 3, lines 30-40--, does not comprise a functional die and covers

the majority of the opening.

See that "defective" is being considered a label. Labels or functional language such as we have here in "defective" does not structurally distinguish the claim over the prior art which shows a structure that may likewise be labeled defective. See *In re Pearson* 181 USPQ 641, Ex parte Minks 169 USPQ 120, and *In re Swinwhart* 169

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 30-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eng et al. (5952611) in view of Vindasius et al. (US 6098278).

Eng et al. teaches:

- A substrate 76 having a first surface with a pattern 84,100 of conductors
- The substrate having a second surface including a die attach site

by Vindasius.

A wire bond slot 86 forming an opening through the substrate

A cover member 60, wherein the cover member comprises tape –
 Col 3, lines 30-40--, does not comprise a functional die and covers

the majority of the opening.

However, see that Eng et al. fails to mention defective die sites. See that Vindasius discloses (col. 4, lines 18+) defective dies marked with dots 34. It would be obvious to incorporate the teachings of Vindasius to those of Eng et al. in order to provide Eng et al.'s die attach area with a defective die which will provide a defective die attach area since defective dies are common in the manufacturing thereof as suggested
